FUNCTION OF ROOT ELEVATORS IN SURGERY

To Loosen Tooth or Root From Bony Socket Prior to Placement of The Extraction Forceps.

Dental Root Elevators

To look at one of these instruments you might mistake it for a narrow screwdriver.

That's because just like one an elevator has a handle and then a specially designed "blade" or tip portion.

How they're used.

The tip of an elevator is designed to be wedged into the ligament space between a tooth and its surrounding bone (as shown in our animation).

As the elevator is forced into and twisted around in this space, the tooth is rocked around and pressed against the walls of its socket.

This helps to both expand the shape of the socket and separate the tooth from its ligament.

As this work is continued, the tooth gradually becomes more and more mobile.

In some cases, the dentist may be able to completely remove the tooth just using their elevator.

If not, they will choose a point where they feel they have accomplished as much as they can with it and will then switch to using extraction forceps.

Bernard Root Elevators are particularly suitable for the excision of fractured roots or root fragments. They represent a combination of root tip elevators and luxating elevators. The inner side is concave and the laterals edges are for cutting. This allow for rotatory movements, and when applying slight pressure, the ligaments can be separated and the remaining root fragments can be loosened.

This section includes a set of five Bernard Root Elevators, including Left, Right, Straight, Mesial & Distal form. All elevators are made from, Surgical Stainless Steel Hallow handle, light weight Completely Sterilizable

Bernard Root elevators also know as Syndesmotomes. They can also be use as Periotome or to elevate Small Roots

LUXATORS SET OF 4 PCS

Directa

Description:

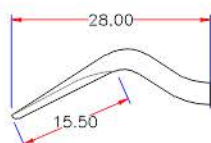

The Luxator P-series offers good tactility and reach with the penholder grip. These instruments are thinner and sharper than the original Luxator instruments. Initiating the extraction process with the P-series range will simplify your work. Luxator P-series kit Contains: 4 different blade shapes: ST22415 Luxator P1, straight blade, dark green - Straight universal periosteal, ideal for anteriors and premolars. ST22416 Luxator P2, curved blade, light blue - A slightly curved periosteal for improved ergonomics. ST22417 Luxator P3, contra angle blade, dark blue - Distal use, specially designed for use on posteriors. ST22418 Luxator P4, dual edge blade, lilac - For fractured root tips and very decayed teeth
